

Assignment: Next.js Weather App

Overview:

You are tasked with building a simple weather application using Next.js, TypeScript, and Tailwind CSS. This application should allow users to enter a location and view the current weather conditions for that location. Additionally, it should display a 5-day forecast for the location.

Requirements:

1. Frontend:

- Create a Next.js application with TypeScript support.
- Use Tailwind CSS for styling.
- Implement a form where users can input a location.
- Display the current weather conditions for the entered location.
- Display a 5-day forecast for the location (temperature highs and lows, weather descriptions, etc.).

2. Backend/API:

- Implement server-side API calling using Next.js API routes.
- Use a free weather API of your choice (e.g., OpenWeatherMap, Weatherstack) to fetch weather data. Ensure you handle API requests securely.

3. Deployment:

- Deploy your application to a platform of your choice (e.g., Vercel, Netlify).

4. Bonus Points (Optional):

- Implement error handling for API requests.
- Make the UI responsive and accessible.

Instructions:

5. Build the application according to the requirements outlined above.
6. Once completed, deploy the application to your chosen hosting platform.
7. Send us the link to your repository and the deployed application.

Additional Notes:

- Your code should be well-organized, maintainable, and follow best practices.
- Feel free to use any additional libraries or tools that you think would be helpful.
- Ensure your code is properly commented and easy to understand.

APIs:

- You are free to choose any free weather API for this assignment. Some options include:
 - OpenWeatherMap
 - [Weatherstack](#)
 - MetaWeather

Resources:

- Next.js Documentation: <https://nextjs.org/docs/getting-started>
- Tailwind CSS Documentation: <https://tailwindcss.com/docs>
- TypeScript Documentation: <https://www.typescriptlang.org/docs>

Feel free to adjust or expand upon this assignment as needed. Good luck, and we look forward to seeing your work!
